

Assignment #2_A

SECTION A (2*5=10)

1. What are the demerits of SLR parser?
2. What is top-down parsing? Explain with the help of an example.
3. What are the advantages and disadvantages of table-driven predictive parsing?
4. Why LR parsing is good and attractive? Also explain its demerits, if any
5. Differentiate between SLR and LALR.

SECTION B (7*3=21 Mark)

1. Explain the FIRST-FOLLOW procedure.
2. Explain shift-reduce parsing with stack implementation.
3. Explain error recovery strategies in predictive parsing.

SECTION C (11*3=33 Mark)

1. Compute FIRST and FOLLOW of given grammars. And create LL(1) Parsing table.

$E \rightarrow E+T \mid T$

$T \rightarrow T * F \mid F$

$F \rightarrow (E) \mid id$

2. Construct LR(0) parsing tables for given grammar:

$E \rightarrow E+T \mid T$

$T \rightarrow T * F \mid F$

$F \rightarrow (E) \mid id$

3. Explain LR parsers. What are its components?
